

October Product of the Month

Taurador

As housing approaches, you may be looking to prepare for the housing worming/ectoparasite treatment? If you are, we are happy to recommend Taurador. Taurador contains pour-on doramectin, a long lasting member of the ivermectin group of wormers. Its duration of action means fewer treatments are required for grazing animals, reducing the number of times the stock have to be handled.

It can also be given up to 5 weeks before housing without then having to treat again when they do actually come in.

For more information or advice about these conditions please ring us at the practice and speak to one of our vets
