

The George Farm Vets run regular APHA approved training courses in the artificial insemination of cattle. These take place over three days with small group sizes allowing for maximum assistance and supervision.

The course covers:

- AI legislation
- Advantages and disadvantages of AI/DIY AI
- Anatomy and physiology of the female reproductive tract
- Heat detection and timing of insemination
- Semen collection, storage and thawing
- Welfare and disease control
- Managing for insemination
- Health and safety
- Fertility targets
- Handling tracts
- Practical AI

At the end of the course you will a certificate of competence in the technique and will be licenced to carry out AI of cattle in England, Scotland and Wales.
